

## PROJECT PROFILE FORM

NAB Project № [completed by NAB] GIP code/Project № [obtain from DSPPAC] Cost Centre/Activity № [obtain from Dept.] Donor/DSPPAC file № [obtain from DSPPAC]

[Please keep responses brief and limit each to 200 words]

1. **Project title:** Restoring and Protecting Biodiversity, Coastal Landscapes and Climate Change Resilience through Nature Based Solutions, Women and Youth Entrepreneurship in Vanuatu.

**2. Project description:** [Brief description of project, key activities and outputs, how will it be implemented?] The project will improve climate change resilience, food security and livelihood opportunities through community led NBS in coastal communities in Vanuatu. The expected impact is improved and resilient biodiversity, coastal lands, nearshore aquatic resources and livelihoods for the local population.

Primarily, the project will benefit the governments of Vanuatu, and will directly improve the lives of 22,500 beneficiaries/5,000 households equally distributed across Vanuatu. Women and youth will be prioritized, but because the project aims to improve biodiversity, coastal lands, nearshores and aquatic resources, it will benefit the entire populations of Vanuatu.

The project starts with a participatory approach with stakeholder engagement activities for the identification of NBS and the identification and development of women and youth lead entrepreneurship. Through these approaches, participatory conservation and restoration efforts will be truly led by women and youth groups, in partnership with local authorities, through entrepreneurial activities linked to sustainable tourism and learning, as well as community-fisheries that will ensure the empowerment of women, girls and boys and ensure the long-term sustainability of the project. When planning support to strengthen community resilience, the point of departure is to recognize the ever evolving and dynamic nature of communities and the underlying vulnerabilities that challenge them. Being resilient includes being flexible in the face of changing risks, which are especially accentuated in the Pacific given their exposure to climate variability, and increasingly influencing risk patterns along the steps of a change management process for sustainable development. To enable communities to strengthen resilience through NBS, the below elements will be included in the first phase of the project: (i) a broad understanding of the climate induced risks from inaction and its consequences; (ii) a holistic approach to community resilience, as these are multidimensional systems within wider systems, meaning that coordination should be across sectors and should be operationalized across levels; (iii) responding to communities' own understanding of the risks of inaction and the benefits of sustainable NBS which promote income generation; (iv) people centred, or listening and understanding people's perspectives; (v) being inclusive, without discrimination.

The main objective of this project is to "*improve climate change resilience, food security and livelihood opportunities through community led NBS in coastal communities in Vanuatu.*"

There are 3 components:

- 1. Develop and implement gender sensitive national policies to support nature-based solutions and ecosystem valuation
- 2. Restore and protect coastal biodiversity, lands, nearshore and aquatic resources through community-led NBS and entrepreneurship, in locations with high dependence on biodiversity and ecosystem services (for resilience and livelihoods).
- 3. Facilitate knowledge sharing, awareness and collaborative engagement for ecosystem management between communities, islands, countries and territories.

Phase I (January to December 2024): This phase will be marked by a strong focus on achieving Outcome 1 and the activities.

### **Outcome I: NBS for women and youth Identified**

The following activities will be technically designed and led by FAO in close collaboration with UNOPS, local and

national authorities and other relevant partners.

- Activity 1.1: Develop community profiles of the loss of biodiversity, coastal lands nearshore and aquatic resources through participatory consultations and mapping in 11 communities in Vanuatu.
- Activity 1.2: Identify the scope of biodiversity, coastal lands, nearshore and aquatic resources restoration and protection by consulting 11 communities in Vanuatu.
- Activity 1.3: Identify and prioritise traditional practices related to NBS by consulting 11 communities in Vanuatu.
- Activity 1.4: Identify at least 5,000 households from Vanuatu on the basis of their ongoing relevant activities and endorsement by local and national authorities to implement NBS entrepreneurship activities.

Phase II (January to December 2025): This phase will be marked by a strong focus on achieving result 2 and the associated activities.

# Outcome II: Women and youth led NBS entrepreneurship established for about 5,000 households.

- Activity 2.1: Select at least one demonstration site for using NBS and entrepreneurship to restore and protect biodiversity, coastal lands, nearshore and aquatic resources in consultation with local and national authorities in each of the targeted communities in Vanuatu.
- Activity 2.2: Train about 5,000 households in NBS approaches to the restoration and protection of biodiversity, coastal lands, nearshore and aquatic resources in Vanuatu. Organise two separate workshops on restoration and protection.
- Activity 2.3: Propagate, replant and regenerate about 200,000 coastal trees and shrubs in Vanuatu, including through direct seeding. This will include distribution of kits to about 5,000 households, each kit containing at least 15 tree seedlings/propagules (mainly food and culturally important trees), information and tools.
- Activity 2.4: Train about 5,000 households in NBS entrepreneurship. This will cover small business skills, agritourism, value addition, post-harvest handling of crops and fish, marketing and digitalization.

Phase III (January to December xxxx): This phase will be marked by a strong focus on achieving Outcome 3 and 4, and the associated activities.

Outcome III: A gender sensitive policy to adequately manage coastal ecosystems is developed and implemented

- Activity 3.1: Enhancing and strengthening of the gender sensitive National Policies for ecosystem management with practical and precise action plans, informed by the project experience of scalable solutions in Vanuatu.
- Activity 3.2: Implement the gender sensitive National Policies developed with practical and precise action plans, informed by the project experience of scalable solutions in Vanuatu

# Outcome IV: Public communication campaign promoting NBS developed and implemented via knowledge sharing.

- Activity 4.1: Drawing on the FAO SIDS Solutions Platform, which facilitates knowledge sharing, identify and develop electronic and video profiles of at least 6 scalable solutions from Vanuatu (5) for learning and learning between Project sites targeted by this project.
- Activity 4.1: Organize and facilitate at least three virtual knowledge sharing and learning workshops that draw on, and promote scalable solutions from the project experience between the targeted Project sites

19. Project rationale: [What is the rationale for the project? What is its strategic context? What is the primary need, and how was it identified? Is this program building on any previous activities, projects or policy?] Vanuatu is part of a specific set of Pacific Islands where its populations, and more specifically coastal communities, depend on their immediate natural environment as a direct source of food and income. Across these islands, the health of oceans and coastal lands is critical for the environment, the economy, and people's overall quality of life.

Vanuatu however are among the world's most vulnerable regions to climate change and accordingly in need of major adaptation initiatives. They are affected by repeated volcanic eruptions, earthquakes, cyclones, floods, droughts, invasive sea level rise, which rapidly erodes their exceptional terrestrial and marine biodiversity, green coastal lands, nearshores, blue reefs and other aquatic resources. Economic development, and demographic pressure on land and marine resources, including overfishing, have already exacerbated these challenges.2

The loss of biodiversity, coastal lands, and aquatic life, in parallel, has had major societal and gender implications, in shaping the quality of life for women, girls, boys and the elderly. As a result of reduced livelihood opportunities associated with these dynamics, the already marginalised voices of women and youth are further undermined in the conservation and management of communities' natural resources. Vanuatu, are home to approximately 300,019 people respectively, and are vulnerable for reasons related to their exposure to climate variability and in turn natural disasters. Very often in fact, the time between disasters is too short for affected populations to recover, with approximately two cyclones occurring between September and April every year, and volcanic eruptions or earthquakes preceding such events and following suit. Erosion and coastal land loss can also be up to 2.5 metres. The January 2022 volcanic eruption in Tonga is a symbolic example of how biodiversity, coastal lands, nearshores and reefs are under severe threat across these countries. Moreover, the COVID-19 pandemic has worsened their resilience, by narrowing existing incomes and overall socio-economic opportunities.

Prioritizing Nature Base Solutions to enhance protection against climate hazards and supporting low emissions climate resilience development, combined with economic development opportunities for vulnerable groups, offers a long-term solution to these countries' ability to develop effective, efficient and equitable solutions for climate adaptation, mitigation, sustainable economic development and biodiversity.

The rationale for targeting Vanuatu is based on their unique vulnerabilities to climate change disasters. Additionally, the high proportion of youth population across the target location, and gendered management of natural resources, has a major impact on every area of development in the region over the coming decades.

The rationale for targeting the restoration and protection of biodiversity, coastal lands, nearshore and aquatic resources build on the fact that these are the critical sources for environmental, social and economic wellbeing.

Unfortunately, livelihood socio economic fabrics are under significant existential threat from climate change and demographic pressure, and hence the need to strengthen the interlinkages

between entrepreneurship and NBS as an enabler to improve the lives of women, boys and girls and contribute to improving gender parity and youth inclusion in sustainable development.

**20. Project objective against the baseline:** [What is the objective of the project? Describe the baseline scenario (i.e. emissions baseline, climate vulnerability baseline, key barriers, challenges and/or policies) and the outcomes and the impact that the project will aim to achieve in improving the baseline scenario. Refer to the logical framework and theory of change template below]

Proposal stage will give more information on this section.

As for the evidence for baseline conducted

- the DEPC and Department of Forestry provide the Biorap of the Kaori Reserve in Erromango Island, the Vanua Lava Island biodiversity hotspot and Ambae Island Lake Forest.
- Department of Agriculture provide Food Basket project for the island of Malo
- **21. Policy coherence and alignment:** [provide details as to how the project aligns with the National Sustainable Development Plan (pillar, goal and objective), the Climate Change and Disaster Risk Reduction Policy, and other policies, plans, strategies and priorities]

The national aspirations under the NSDP includes: (i) a vibrant cultural identity underpinning a peaceful, just and inclusive society; supported by responsive and capable state institutions delivering quality public services, including health and education, to all citizens; (ii) maintaining a pristine natural environment on land and at sea that serves our food, cultural, economic and ecological needs; (iii) with enhanced resilience and adaptive capacity to climate change and natural disasters; and (iv) a stable economy based on equitable, sustainable growth that creates jobs and income earning opportunities accessible to all people in rural and urban areas.

The Vanuatu's Climate Change and Disaster Risk Reduction Policy (CCDRR) 2<sup>nd</sup> edition, 2022-2030 is focused on good governance, clear priorities and strategies for future climate actions. The GEF 8 is aligned with 7.4 - Climate change adaptation and disaster risk reduction. Specifically will address 7.4.2 - Integrated climate change Adaptation and disaster risk reduction, 7.4.4 – Loss and Damage and 7.4.5 Ecosystem-based Approaches.

Government of Vanuatu is committed and engaged to accomplish regional and international treaties and conventions, to nature-positive development:

International Trade (Flora and Fauna) Act and Regulations enacted (1989) after ratifying CITES.

- Convention on Biological Diversity ratified, 1993.
- Environmental Protection and Conservation Act (2002) defining the Government's commitment to achieving environmental sustainability and to engaging in multilateral cooperation.
- Agreement Establishing the South Pacific Regional Environment Programme (SPREP), signed 2006.
- Nagoya protocol: signed 2011
- Ramsar Convention: Vanuatu joined the Ramsar Convention with its first wetland site Lake Letas (Gaua Island).
- Framework for Resilient Development in the Pacific: An Integrated Approach to Address Climate Change and Disaster Risk Management (FRDP, 2017-2030)
- Vanuatu is committed to the Small Island Developing States Accelerated Modalities of Action (SAMOA) Pathway.
- Vanuatu signed up to the 2050 Strategy for the Blue Pacific Continent targeting regional enabling environments.

22. Current status: [progress to date and current activities]

We are at the concept note stage and submitting the Expression of Interest (EOI) on 17 <sup>41</sup> of February 2023							
<b>23. Market overview:</b> [If the project involves a particular market describe the products or services including the historical data and forecasts. If applicable, provide the key competitors with market shares and customer base. Also provide, if any, pricing structures, price controls, subsidies available and government involvement.] No information at this stage.							
24. Implementing / executing entity background / justification: [Quality of the management team, overall strategy, financial profile, equity investment, management, operations, production and marketing] No information at this stage.							
25. Institutional / implementation arrangements: [Governance structure of the project, organisation structure, roles and responsibilities of the project management unit, steering committee, executing entities and flow of funds structure. construction and supervision methodology with key contractual agreements, operational arrangements with key contractual agreements following the completion of construction] No information at this stage.							
26. Results Areas [GCF projects only]							
Reduced emissions from (mitigation): Increased resilience of (adaptation):							
□ Energy access and power generation ⊠ Most vulnerable people and communities							
□ Low emission transport □ Health/well-being, & food/water security							
Buildings, cities, industries & appliances Infrastructure and built environment							
Image: Second systemImage: Second system							
27. Expected performance against investment criteria [GCF projects only] [brief description]							
<b>1.</b> Impact Potential: [Potential of the project to contribute to the achievement of the GCF's							
objectives and result areas]							
<b>2. Paradigm Shift Potential:</b> [Degree to which the proposed activity can catalyse impact beyond a one-off project investment]							
<b>3. Sustainable Development Potential:</b> [Environmental, social and economic co-benefits, including gender-sensitive development impact]							
<b>4. Needs of the Recipient:</b> [Vulnerability and financing needs of the beneficiary country and population]							
5. <b>Country Ownership:</b> [Beneficiary country's ownership of, and capacity to implement, a funded project]							
6. Efficiency and Effectiveness: [Economic and financial soundness of the project]							
<ul> <li>28. Consultation [Specify the plan for multi-stakeholder engagement, and what is been done so far in this regard, e.g. National, Provincial, Community, Civil Society, Private Sector]</li> <li>Yes, the consultation was done at the community level, with the stakeholders, NGOs, Civil Society and Private Sector.</li> </ul>							
29. Potential overlaps / duplication to be resolved: [What related projects are being undertaken in the							
area?]							
No, because we are working on new project sites.							
<ul> <li>30. Technical feasibility/evaluation: [Brief summary of technical feasibility of project. Will the project fund local staff? If so, where? Are there additional staff required (e.g., counterparts, proposed T/A Positions)? TOR must be included for all T/A positions.</li> <li>No information at this stage.</li> </ul>							
31. Economic and financial analysis/viability: [Brief summary of the economic and financial viability of							
the project]							
No information at this stage.							
<b>32. Financial management and procurement:</b> [Describe the project's financial management and procurement, including financial accounting, disbursement methods and auditing]							
No information at this stage.							
33. Environmental and social considerations: [e.g. environmental and social impact safeguards /							
assessments, vulnerability framework]							
No information at this stage.							
<b>34. Gender and social inclusion considerations:</b> [e.g. gender, disability, indigenous concerns, assessment of any benefits from project to women, youth, children and vulnerable groups]							

. . .

Activities	Description	Inputs		Descriptio	on		
1.1		1.1.1.		[Expand ta	ables as	needed]	

\*please use this format only if there is not a mandatory format required by the implementing/executing entity

#### 43. Project budget summary (estimated in Vatu '000)

Items/component	Year 1	Year 2	Year 3	Year 4	Year 5	Total	% of Total
Loans [specify source]							
Grants [specify source]							
Aid in kind*							
Government of Vanuatu							
Other e.g. GCF, community							
expand table as needed							
Total							100%

\* contributions made directly towards projects realisation such as equipment, materials, labour, T/A, building works, vehicles, time etc. and other quantifiable resources that count towards the achievement of the project results

#### 44. Project component costs (estimated in Vatu '000)

Items/component	Year 1	Year 2	Year 3	Year 4	Year 5	Total	% of Total
Equipment/materials							
Personnel/staff/labour							
- e.g. technical assistance							
- e.g. local salaries							
Training/workshops etc.							
Travel							
expand table as needed							
Total							100%

This is for the main project components only. Not every cost needs to be specified. Other examples of components might be accommodation, vehicles, fuel, freight, allowances, VNPF contributions, telephone, computers, stationery, an implementing entity administrative fee (if included as part of the loan/grant), project monitoring, contracts, rent, printing, overheads etc.

#### 45. Project risk factors, mitigation measures, and assessment tool\*

[Use tool to describe the financial, technical/operational, social/environmental and other risks that may prevent the project objectives from being achieved, and proposed risk mitigation measures.]

Selected Risk Factor 1							
Description	Risk category	Level of impact	Probability	Score			
[Description of risk factor, e.g. new government regulations, loss of key staff, delays in delivery of equipment etc.]	Select [financial, technical/operational, social/environmental, other]	Select [low <5% of project value, medium 5-20%, high >20%]	Select [low, medium, high]				
Mitigation Measure(s)							

[Describe how the identified risk will be mitigated or managed. Do the mitigation measures lower the probability of risk occurring? If so, to what level?]

[Information provided on this form will be made publicly available unless otherwise agreed with the NAB Secretariat] Page 8 of 9
