#### Pacific Ecosystem-based Adaptation to Climate Change (PEBACC)

PEBACC is a new sub-regional ecosystem-based adaptation project falling under the Ecosystem-based Adaptation Programme in the Biodiversity and Ecosystems Management Division. Funded by the Germany's Federal Ministry of Environment, Nature Conservation, Building and Nuclear Safety (BMUB), this five year<sup>1</sup>

<sup>&</sup>lt;sup>1</sup> Due to various delays project start-up has been delayed by one year. The project is scheduled to run from July 2014 to June 2019. An application has been made for a one year no-cost extension to bring the implementation timeframe into alignment with the delayed start-up. This would see the project running until June 2020.

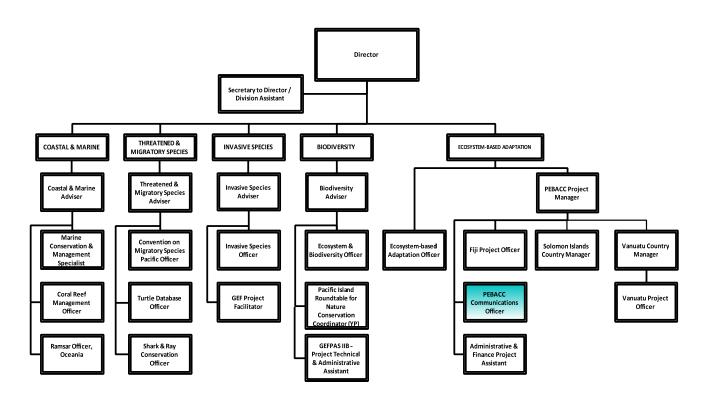

project aims to ensure that EbA is fully integrated into development, climate change adaptation and natural resource management policy and planning processes in three Pacific island countries, providing replicable models for other countries in the region. Pacific Island Countries participating in this project include Fiji, Vanuatu and Solomon Islands. The project will be coordinated and managed from a SPREP satellite office in Suva, Fiji.

The project has four Outputs, one of which is 'Communications and outreach products are developed to promote integration of EbA options into climate change policies, plans and projects.' The use of communications to raise awareness of EbA approaches to climate change adaption is therefore a key strategy that the project will use to achieve its overall outcome. Towards this end PEBACC requires the services of a skilled and experienced Communications Officer to be based at the project office in Suva, Fiji, where they will support the communications needs of all three project countries.
